API Description:

Health Gorilla was founded in 2014 as a secure interoperability solution to enable healthcare ecosystems around the world to share heath data in one place. They power fundamental clinical workflows by connecting 47,000 care sites, and solve multiple data access needs without having to work with multiple vendors. This company is trusted by top developers in healthcare, and provides one of the fastest ways to access complete clinical data. In order to maintain this high standard, Health Gorilla offers APIs that enable digital health developers to instantly retrieve high quality complete patient data from thousands of vendors. The APIs are built on FHIR standards (with a lower barrier to entry than IHE profiles), and allow individuals to start receiving data within a week.

Health Gorilla is compliant with the standard end processes of FHIR STU-3 and IHE profiles. By being a certified connector to CommonWell Health Alliance and Carequality, Health Gorilla can help others connect to their network.

Fundamental Clinical Workflows

Patient360 API- Retrieve medical records from HER systems

CPOE API – Place lab orders & receive test results

NLP API – Structure clinical data from text and images

eFax API – Send and receive fax documents to any provider

FHIR Store API – Store all FHIR resources with read/write capabilities

ID Verification API – Authenticate provider & patient identity

Provider Lookup API – Search an enriched national database of providers and labs
